

Introducing Sage PayPoint

Sage PayPoint is designed specifically for businesses operating within a trade or retail environment and handling customer present transactions.

The software provides your business with a user friendly point of sale environment which allows you to conduct customer sale and payment transactions quickly, accurately and securely.

The program can be customised to reflect the unique processes of your business, adopting the terminology and look and feel, you require making the system easier to use and reducing staff training.

The Sage retail solution supports your business whether you operate a single till or many tills across multiple locations. Sage PayPoint is fully compatible with industry leading hardware including Epson, IBM and J2. Whether your business transacts from a simple PC or via a network of retail terminals, Sage PayPoint is fully scalable to meet your needs.

Integration with your Sage accounting system

Sage PayPoint can be operated as a standalone program. However, if your business handles stock, Sage PayPoint has the ability to integrate with your Sage accounting system allowing you to manage pricing and stock control across your business – an integrated retail solution. Sage PayPoint will integrate seamlessly with the whole Sage accounting range from Sage Line 50 to Sage Line 500.

Is Sage PayPoint suitable for my business?

If you currently process customer present transactions via cash, card or cheque payments then Sage PayPoint is applicable to your business. Although Sage PayPoint integrates with Sage accounting programs, it can also be used as an independent solution.
